

BRAVECTO®

REDUCE
THE TRANSMISSION
OF *BILIARY* WITH
JUST ONE DOSE

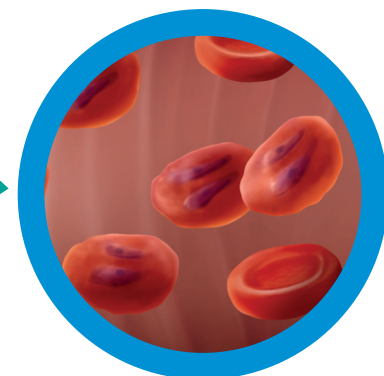

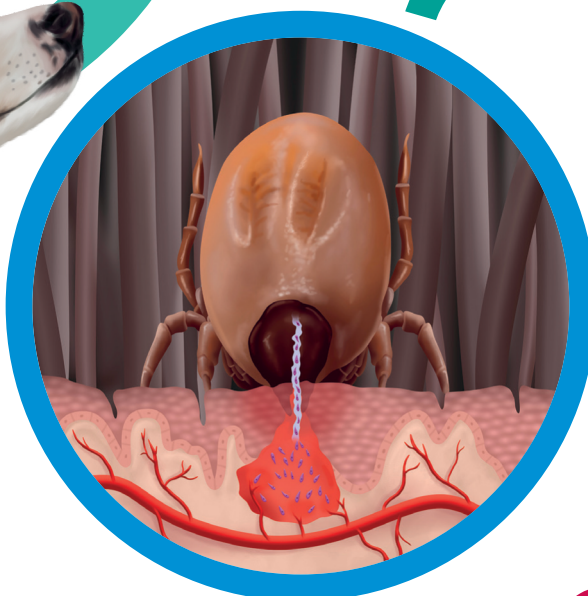

Biliary is a serious disease transmitted to dogs by tick bites. Ticks need to feed on the dog for transmission to occur.

ANAEMIA

BLOOD CELL BREAKDOWN

WEAKNESS

Babesia protozoa infect red blood cells, causing their rupture

BRAVECTO® CHEW AND BRAVECTO® SPOT-ON FOR DOGS

Bravecto®'s high efficacy drastically reduces the transmission of tick-borne diseases as it kills ticks quickly, >90 % within 12 hours of feeding and 100 % within 24 hours, thus minimizing the risk of transmission of biliary.

BRAVECTO® Chew protects for 12 weeks against ticks and fleas

BRAVECTO SPOT-ON® for dogs protects for 4 months against ticks and 6 months against fleas

ELIMINATE TICKS WITH BRAVECTO®

Reduce the transmission of *Babesia* while providing your dog with extended duration protection against fleas and ticks in a single dose.
